THE AUTHORS

Régis Delannoye, a recognised marine malacology expert, has specialized in Martinique land snails studies since 2004. Laurent Charles is manager of the molluscan collections in the Bordeaux Natural History Museum. Jean-Pierre Pointier, PhD, is a researcher at the École Pratique des Hautes Études in Perpignan (USR 3278 CNRS-EPHE-CRIOBE). He has specialized in freshwater molluscs. David Massemin is a naturalistic fascinated, discoverer of new species for science, author and co-author of books, publications and works on molluscs, reptiles, amphibians, primates and flora of Europe and South America.

THE BOOK

This beautifully illustrated book, bilingual (French and English), deals with a fascinating yet largely unknown, group of animals from Martinique island (French West Indies): continental (terrestrial and freshwater) molluscs. After a presentation of the island’s natural habitats, the book draws up a summary of the current knowledge based on recent field collections, a review of literature and consultation of private and public collections. Illustrated keys allow the identification to the class, family, genus or species level. The 86 species from the island are described in detail: ecology, distribution maps, list of the known stations in Martinique, protection status. Beautiful colour plates showing the shells, living animals and habitats are also provided.
