

# Contents

|   |    |
|---|----|
| Preface by Hans-Ulrich Schnitzler ..... | 12 |
| Preface by Ingemar Ahlén .....          | 14 |
| Acknowledgments .....                   | 16 |
| Foreword .....                          | 22 |
| List of species .....                   | 25 |
| Glossary .....                          | 26 |
| List of abbreviations .....             | 35 |

## Chapter 1

### **The biological sonar 37**

|   |    |
|---|----|
| Background .....                                  | 38 |
| Introduction .....                                | 38 |
| Historical background .....                       | 38 |
| General principles of acoustic localization ..... | 40 |
| Basic concepts in acoustics .....                 | 42 |
| The nature of sound .....                         | 42 |
| Sound waves and their characteristics .....       | 42 |
| Sound propagation .....                           | 43 |
| Simple sounds and complex sounds .....            | 44 |
| Sound analysis .....                              | 45 |
| Sound functions .....                             | 46 |
| Emission and reception .....                      | 48 |
| Emission .....                                    | 48 |
| Reception .....                                   | 48 |
| Sonar signals and social calls .....              | 49 |

## Chapter 2

### **Ultrasound detectors 53**

|   |    |
|---|----|
| Technical features of ultrasound detectors .....                          | 54 |
| The microphone .....  | 54 |
| The treatment of perceived ultrasounds .....                              | 56 |
| Ultrasound decoding systems .....   | 58 |
| Frequency division or zero-crossing .....                                 | 58 |
| Heterodyning .....  | 60 |
| Time expansion .....  | 61 |
| Computer-assisted analysis .....  | 63 |
| Which bat detector for which purpose? .....                               | 66 |
| Hand-held detectors .....   | 66 |
| <i>Pure heterodyne detectors</i> .....                                    | 66 |
| <i>Frequency division detectors</i> .....                                 | 67 |
| <i>Detectors with time expansion option</i> .....                         | 67 |
| Automatic recording tools for passive monitoring .....                    | 67 |
| <i>Time expansion and high-frequency recording systems</i> .....          | 68 |
| <i>Frequency division systems</i> .....                                   | 68 |
| Matching technical features to research needs .....                       | 68 |
| <i>Qualitative inventories (species lists)</i> .....                      | 68 |
| <i>Quantitative surveys (activity assessments, habitat studies)</i> ..... | 70 |
| <i>Qualitative and quantitative surveys</i> .....                         | 70 |
| <i>Sonar signal research</i> .....  | 71 |

**Chapter 3 The sonar signals of bats: classification and interpretation 73**

|  |     |
|--|-----|
| Method of auditory analysis.....   | 74  |
| Methodological principle.....  | 74  |
| The identification process.....  | 75  |
| Auditory training.....   | 75  |
| Method of computer-based sound analysis.....   | 77  |
| Using BatSound.....  | 77  |
| Reading the different types of graphical display.....  | 82  |
| <i>The spectrogram: representation of the structure.....</i>                                   | 83  |
| <i>The oscillogram: representation of the envelope.....</i>                                    | 84  |
| <i>The power spectrum: representation of the distribution of energy over frequencies... 85</i> | 85  |
| Interpreting signal structure types.....   | 86  |
| <i>The steep FM structure.....</i>   | 86  |
| <i>The QCF structure.....</i>  | 86  |
| <i>The flat-ended FM structure (FM-QCF).....</i>   | 90  |
| <i>The CF structure (FMa-CF-FMd) or 'Doppler technology'.....</i>                              | 91  |
| <i>Harmonics.....</i>  | 92  |
| Methodology for the measurement of signals.....  | 94  |
| <i>General measurements.....</i>   | 94  |
| <i>Measuring an FM signal.....</i>   | 96  |
| <i>Measuring a QCF type signal (BW &lt; 5 kHz).....</i>  | 98  |
| <i>Measuring FM-QCF and flat-ended FM signals.....</i>   | 101 |
| <i>Measuring FMa-CF-FMd signals.....</i>   | 103 |

**Chapter 4 The acoustic identification of bats 107**

|  |     |
|--|-----|
| Method and equipment.....  | 108 |
| Auditory identification with the heterodyne system.....  | 111 |
| Criteria for species identification.....   | 112 |
| <i>Frequency at maximum energy (FME).....</i>  | 112 |
| <i>Structure.....</i>  | 112 |
| <i>Rhythm.....</i>   | 115 |
| <i>Intensity.....</i>  | 117 |
| Possible confusions.....   | 117 |
| Identification of long CF signals (FM/CF/FM signals of Rhinolophids) ...                                       | 118 |
| Identification of QCF and flat-ended FM signals.....   | 120 |
| <i>Bats emitting QCF and flat-ended FM signals of short to intermediate duration with FME &gt; 30 kHz.....</i> | 120 |
| <i>Bats emitting QCF or flat-ended FM signals of medium to long duration and FME &lt; 30 kHz.....</i>          | 125 |
| Identification of steep FM sweeps.....   | 132 |
| Identification by means of social calls.....   | 133 |
| Simplified identification key in heterodyne detection.....   | 134 |
| Auditory and computer-assisted identification in time expansion.....   | 135 |
| Criteria for species identification.....   | 137 |
| <i>Structure.....</i>  | 137 |
| <i>Bandwidth.....</i>  | 141 |
| <i>Duration.....</i>   | 142 |

|   |     |
|---|-----|
| <i>Timbre</i> .....   | 143 |
| <i>Frequency band position in the general spectrum (overall pitch of the signal)</i> .. | 144 |
| <i>Energy distribution</i> .....  | 145 |
| <i>Rhythm</i> .....   | 150 |
| <i>Reading scatter diagrams</i> .....   | 151 |
| Identification of CF signals (horseshoe bats) .....                                     | 155 |
| Identification of QCF-FMd signals .....   | 158 |
| Identification of QCF, FM-QCF and flat-ended FM signals.....                            | 161 |
| <i>Species with FME &lt; 30 kHz</i> .....   | 162 |
| QCF signals .....   | 164 |
| The case of QCF signals below 20 kHz .....  | 166 |
| QCF and flat-ended FM signals with alternating FMEs .....                               | 167 |
| FM-QCF, flat-ended FM and narrowband FM signals .....                                   | 169 |
| Sequences of QCF, FM-QCF and flat-ended FM signals with FME < 30 kHz.....               | 171 |
| <i>Species with FME &gt; 30 kHz</i> .....   | 176 |
| QCF signals .....   | 181 |
| FM-QCF, flat-ended FM and narrowband FM signals .....                                   | 182 |
| Sequences of QCF, FM-QCF and flat-ended signals with FME > 30 kHz .....                 | 189 |
| Identification of FM sweeps .....   | 192 |
| <i>The nasal timbre</i> .....   | 196 |
| Differentiating genus <i>Barbastella</i> from genus <i>Plecotus</i> .....               | 196 |
| Distinguishing among the <i>Plecotus</i> species.....                                   | 197 |
| Sequences of nasal FM signals.....  | 199 |
| <i>The whistled timbre</i> .....  | 202 |
| Distinguishing true FM species from FM-QCF species.....                                 | 202 |
| A special case: the alternating signals of <i>Barbastella barbastellus</i> .....        | 205 |
| FME < 35 kHz .....  | 207 |
| FME > 35 kHz (genus <i>Myotis</i> ).....  | 209 |
| Identification through social calls.....  | 254 |
| <i>Genus Myotis</i> .....   | 255 |
| <i>Genus Pipistrellus</i> .....   | 255 |
| <i>Genera Hypsugo and Vespertilio</i> .....   | 261 |
| <i>Genus Nyctalus</i> .....   | 262 |
| <i>Genus Plecotus</i> .....   | 263 |
| General identification key .....  | 264 |

## Chapter 5

## Applications

267

|  |     |
|--|-----|
| Locating bat roosts .....  | 268 |
| Introduction and objectives.....   | 268 |
| Preconditions .....  | 268 |
| Preparation .....  | 268 |
| Survey of hunting sites.....   | 269 |
| Survey of flight routes.....   | 269 |
| Survey of roost sites.....   | 269 |
| Survey of mating territories.....  | 271 |
| The survey in practice .....   | 272 |
| Population monitoring.....   | 274 |
| Habitat studies.....   | 278 |
| Are bat detectors objective tools for assessing<br>the biological value of habitats? ..... | 278 |
| Spatio-temporal variability bias.....  | 280 |
| Sites and count points.....  | 280 |

|   |     |
|---|-----|
| Unit of measurement for bat activity .....                        | 282 |
| Identification.....   | 285 |
| Species detectability .....                                       | 286 |
| Types of activity: foraging, transit and social interactions..... | 287 |
| Activity indices.....   | 287 |
| Acoustic surveys.....   | 291 |
| Continuous count transects and point counts.....                  | 293 |
| Duration and repeating of point counts.....                       | 294 |
| Descriptor variables of the habitats .....                        | 295 |
| Continuous recording method .....                                 | 296 |

## Chapter 6 Acoustic ecology 309

|  |     |
|--|-----|
| The concept of acoustic ecology.....   | 310 |
| Example 1: the sonar of the barbastelle.....   | 312 |
| Description of the alternating signals of <i>Barbastella barbastellus</i> ...                                      | 312 |
| Context of emission of alternating signals.....  | 314 |
| Comparing the alternating signals of <i>Barbastella barbastellus</i><br>and <i>Nyctalus noctula</i> .....          | 314 |
| Hypothesis of a relationship between alternated<br>sonar pattern and diet in <i>Barbastella barbastellus</i> ..... | 315 |
| Example 2: the sonar of the greater noctule .....  | 318 |
| Audiograms of passerine birds that migrate by night.....   | 319 |
| Predation pressure .....   | 320 |
| Counter-strategy of the predator .....   | 321 |
| Promising fields for future research.....  | 326 |
| The sudden irruption of <i>Nyctalus leisleri</i> sequences .....   | 326 |
| The signals of long-eared bats .....   | 326 |
| The 'erratic' variations in intensity of <i>Miniopterus schreibersii</i> .....                                     | 328 |
| The inter-individual variability of signal frequency in horseshoe bats..   | 329 |
| Convex versus concave signal structure .....   | 329 |
| The function of the final whack: strong specialization of <i>Myotis</i><br><i>nattereri</i> ? .....                | 330 |

## Chapter 7 Frequently asked questions on acoustic detection Frequently asked questions on acoustic detection and identification 333

|                            |     |
|----------------------------|-----|
| The heterodyne system..... | 334 |
| Time expansion .....       | 336 |
| Scatter diagrams.....      | 338 |
| Bat activity studies.....  | 340 |

## Chapter 8 Perspectives 343

|   |     |
|---|-----|
| Technical developments.....               | 344 |
| Methodological developments.....          | 344 |
| Extending the method worldwide .....      | 345 |
| Dissemination of knowledge and skill..... | 345 |

## Appendices 349

|   |     |
|---|-----|
| Bibliography.....   | 350 |
| Scatter diagrams for the identification of the sonar signals<br>of the three <i>Plecotus</i> species studied..... | 354 |
| Index.....  | 360 |
| Downloadables files .....   | 362 |
