BORAGINALES, OLACACEAE AND ALLIES,
APIACEAE

James S. Miller
Zachary S. Rogers, Valéry Malécot
Fátima Sales, Ian C. Hedge

The present volume includes taxonomic revisions of 3 groups of Angiosperms.

Within the order Boraginales, the circumscription of families has been extensively. 5 of the 11 families currently recognized occur on Madagascar, and are treated in the first part of the volume : Boraginaceae, Coldeniaceae, Cordiaceae, Ehretiaceae, and Heliotropiaceae.

Significant changes have also impacted the classification of the family Olacaceae since it was first treated in "Flora of Madagascar and the Comoro Islands" in 1955. The previously recognized order Olacales has been merged into the Santalales, and Olacaceae were divided into 8 monophyletic families, 3 of which occur on Madagascar and are treated in the second chapter.

The 3rd contribution to this volume deals with Apiaceae, where only a few changes have occurred. The treatment of the 15 genera present on Madagascar is complemented with an overview of the cultivated members of the family present on the island.

In keeping with the revised format of the "Faune et flore tropicales" collection, this volume includes, for each of the 3 chapters, a general overview of the families followed by detailed descriptions of the species, comprising accurate and up-to-date taxonomic and nomenclatural information, and line drawings for nearly all species along with many photographs; identification keys are provided in English and in French, and a distribution map is given for each species separately; preliminary risk of extinction assessments are also provided based on the IUCN Red List requirements.
