

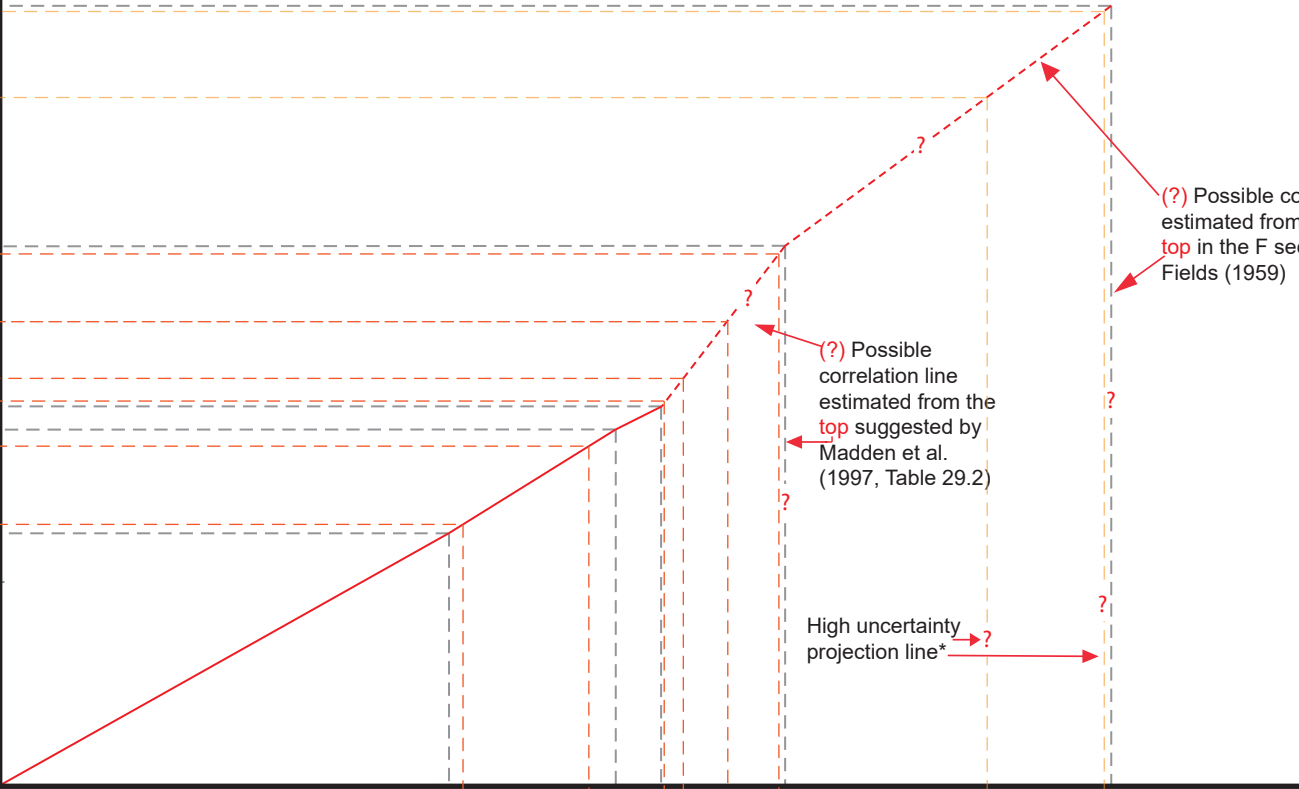

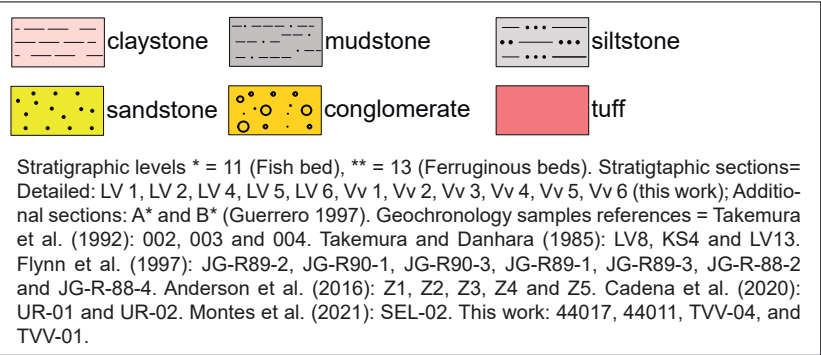

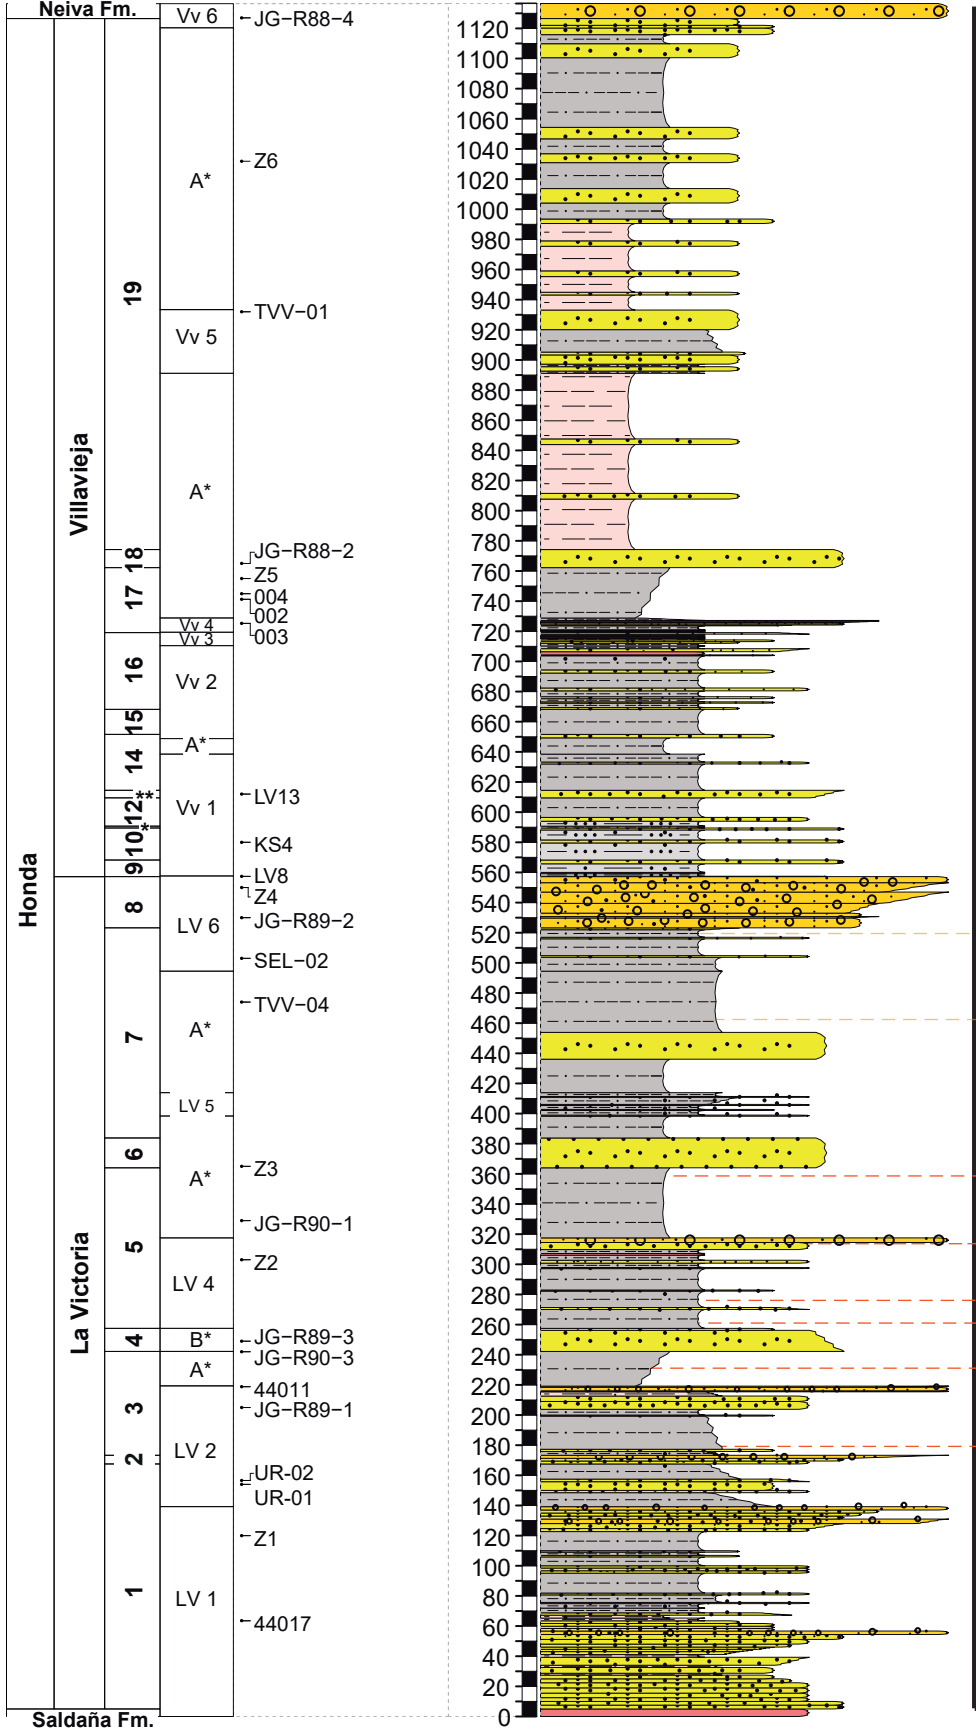

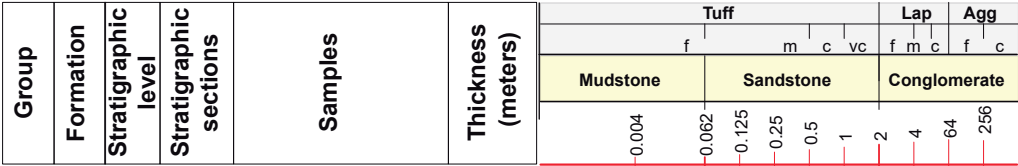

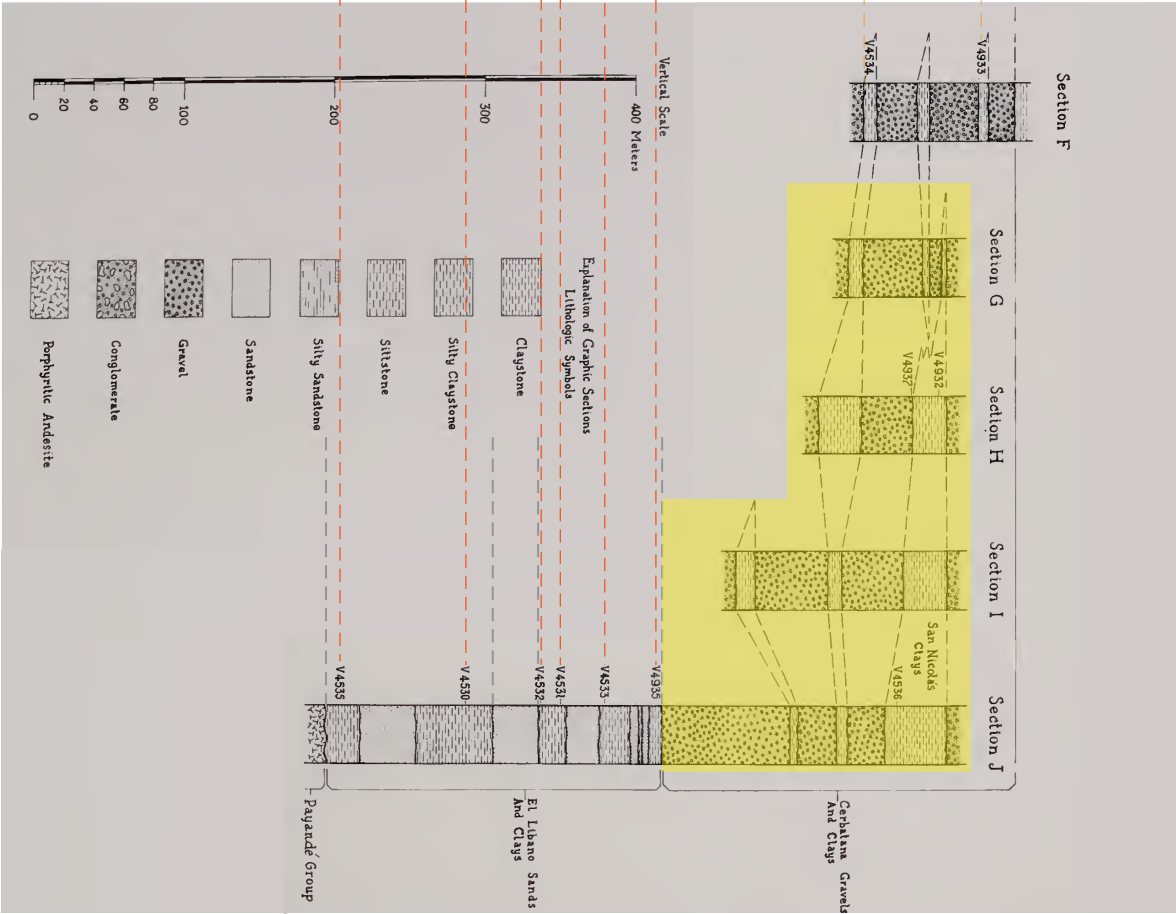

Graphic correlation between Composite section (This work) and Fields (1959)

This work

Stratigraphic sections highlighted in yellow involve a geographic area where there are geological faults (Fields 1959; Guerrero 1993, 1997). Consequently, the fossil localities reported there were located stratigraphically sensu stricto Cifelli and Villarroel (1997), Villarroel and Colwell (1997), Johnson and Madden (1997), Goin (1997), Czaplewski (1997), Walton (1997) and Madden et al. (1997). \*The projection lines with high uncertainty (drawn in pale yellow), indicate that although the stratigraphic position of these localities is very uncertain, they could correspond to those indicated in the section.
