

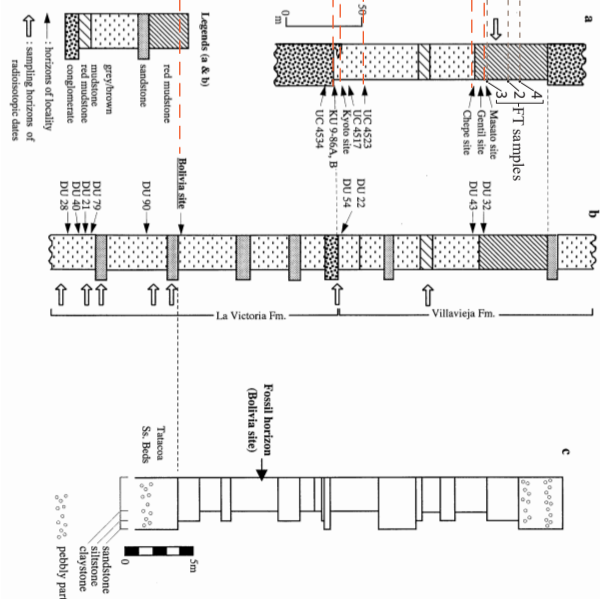

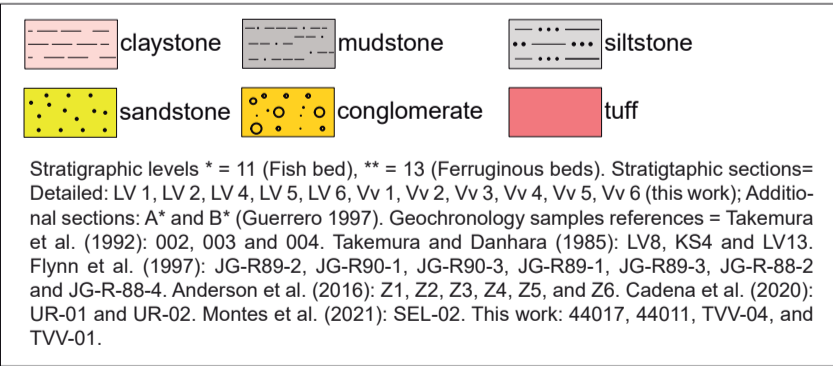

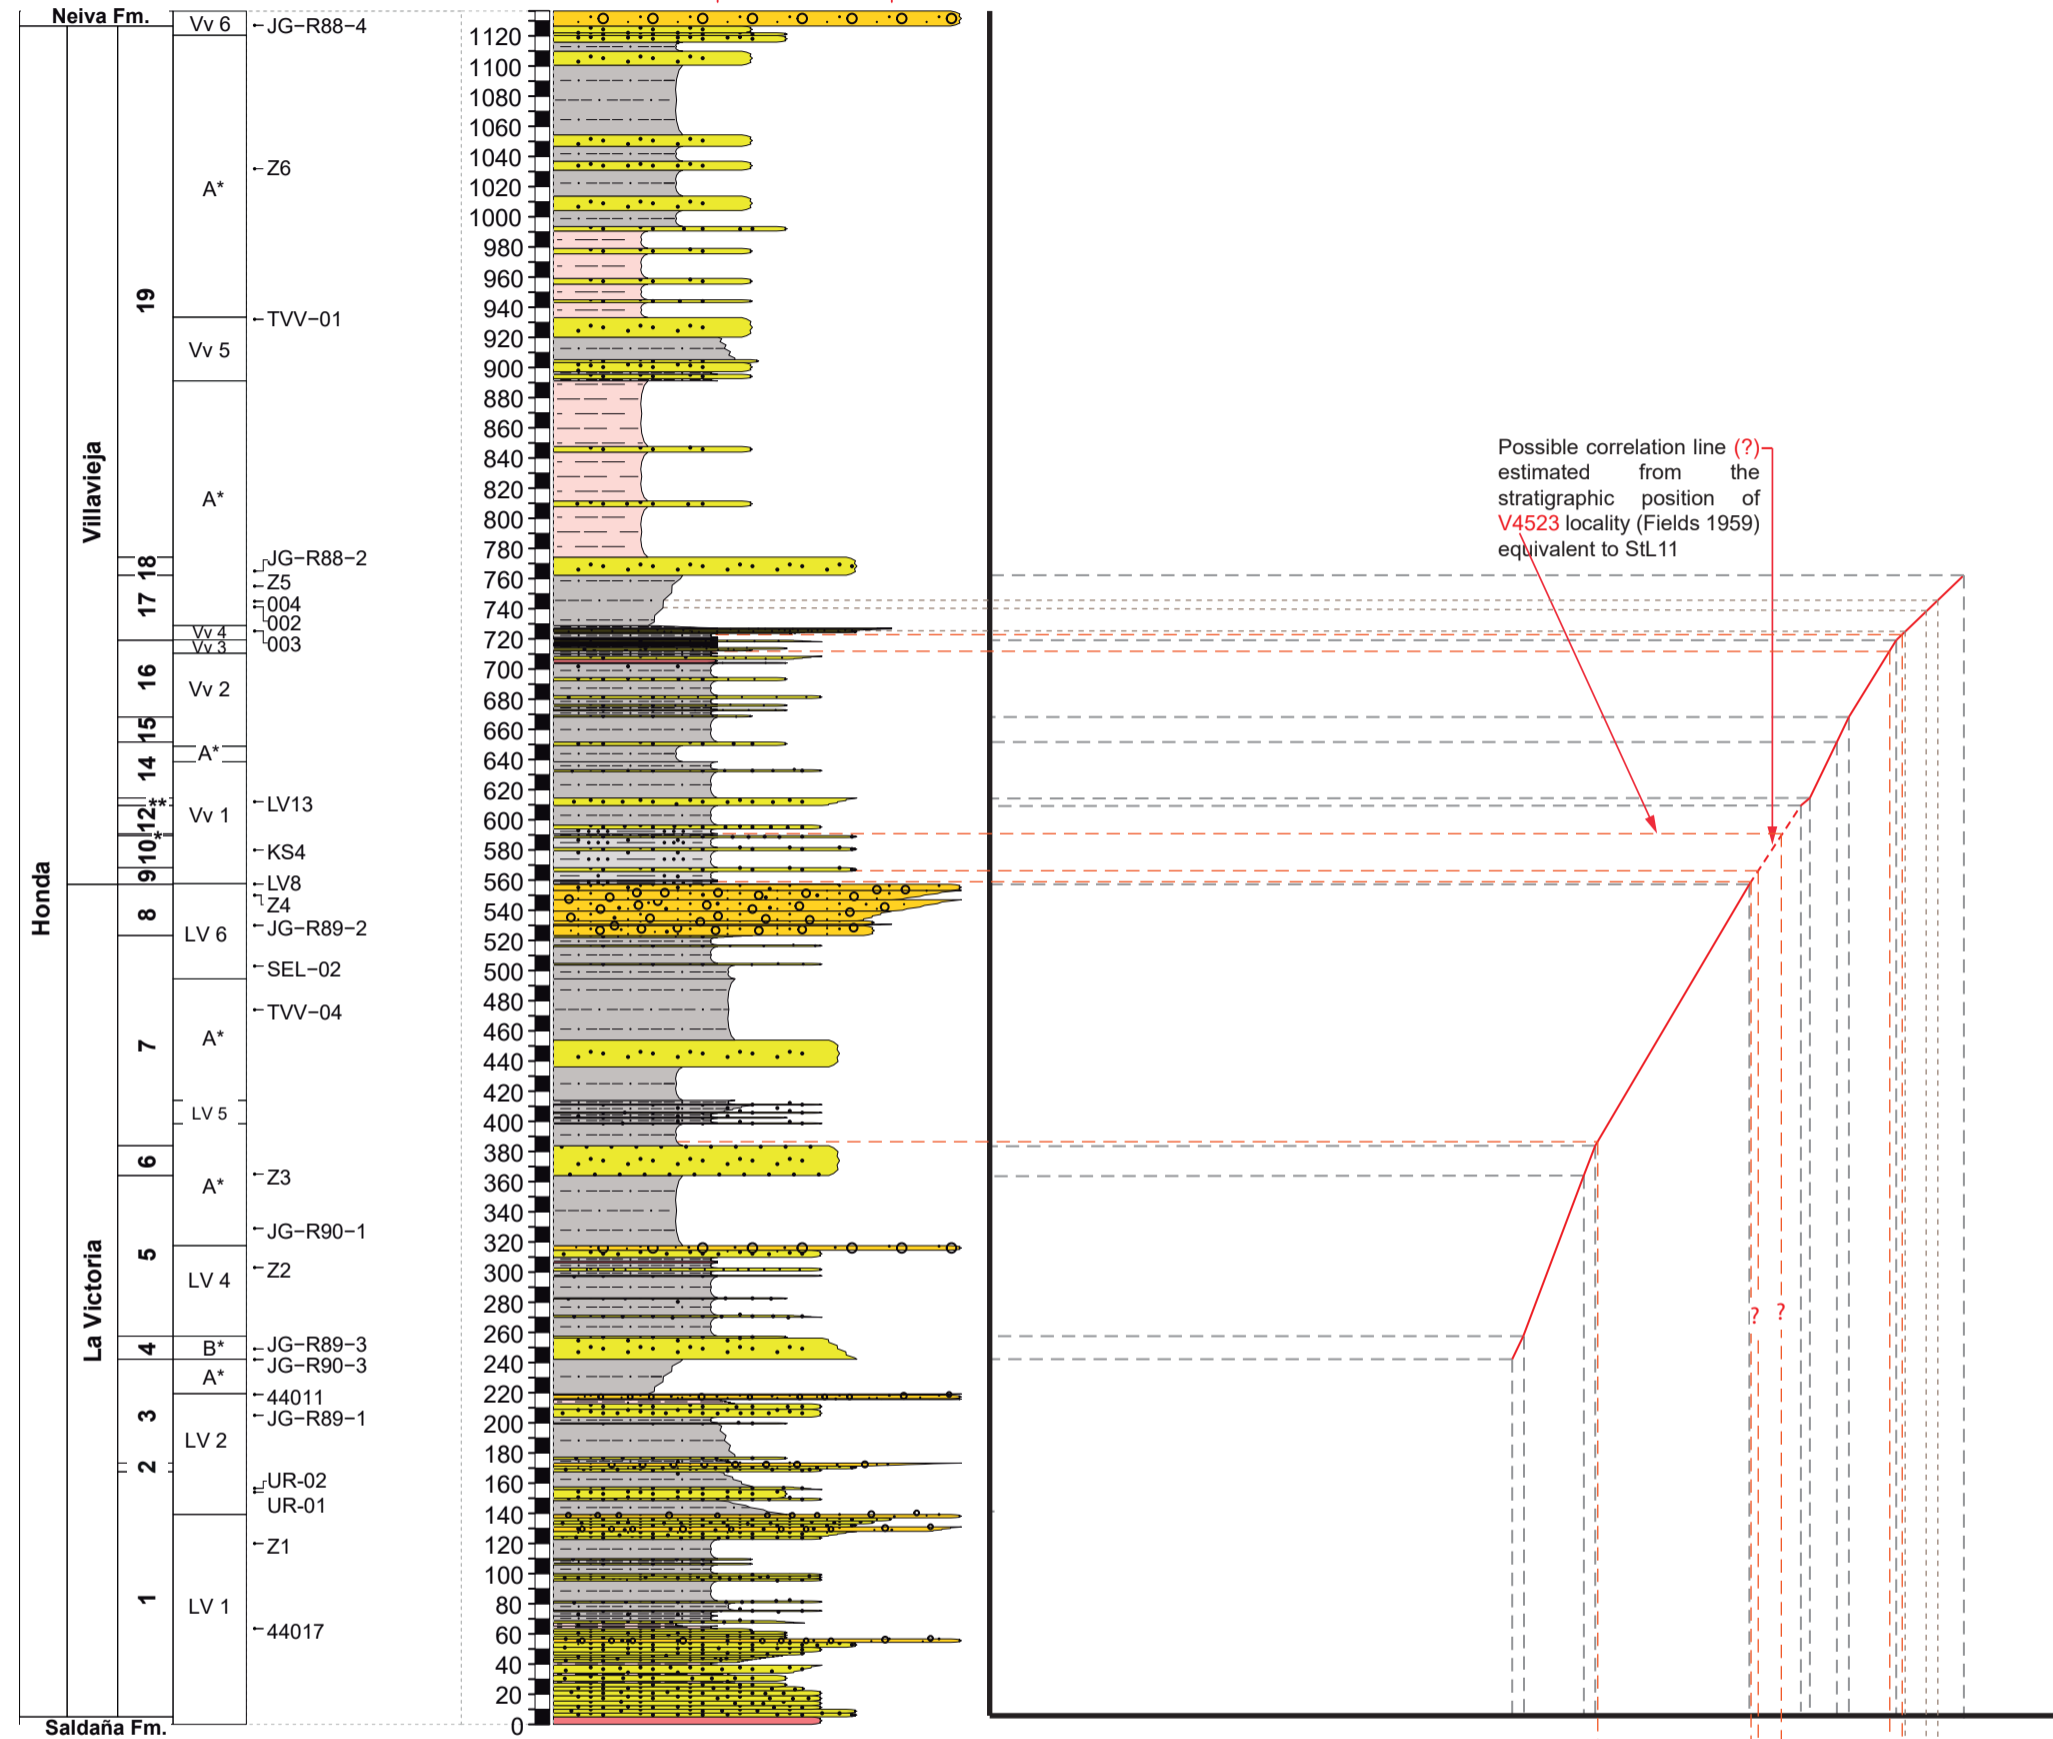

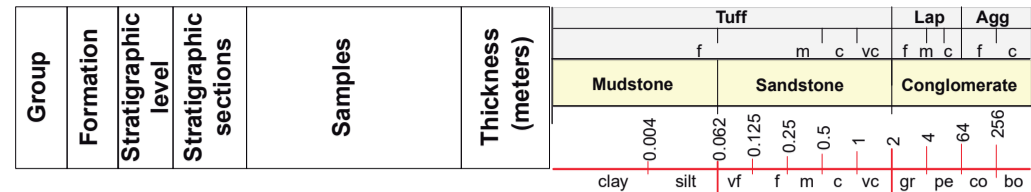

Graphic correlation between Composite section (This work) and Takai et al. (2001)

This work

In agreement with Takai (1994), El Dinde locality is just above Kyoto site. The author indicates that sections represent information from other authors (a Takai et al. 1992; b Guerrero 1997). DU localities were correlated with the Guerrero's sections. The a section was presented by Takai et al. (1992), Takemura et al. (1992) report the stratigraphic position of fission track samples (FT).
